

NIX has the equipment and skills to provide customers with a range of industrial services including abrasive blasting, painting, polyurea & other plural components, and spray foam insulation. The Field Coatings team takes pride in the work they provide and continuously strives for quality results. Our team is equipped with a vapor blaster, power washing, 2 plural component Graco reactors, 2 mobile air compressors, blast pots, 4 trucks and 3 trailers.

UNILATOR TANK REFURBISHMENT

A recent project involved a tank refurbishment in Lapel, Indiana. When the customer came to us, they were experiencing metal loss due to exposed steel corroding over time. Along with being an eye sore to their customers, severe corrosion and metal loss can lead to catastrophic failures causing further safety and environmental challenges.

Our steps to prevent this from occurring and protect the company's assets are as follows:

- Step 1. Abrasive Blasting per SSPC-SP 6 to Remove Existing Coatings**
- Step 2. Applying 1 Coat of Epoxy as a Primer/Barrier Coating**
- Step 3. Applying 1 Coat of Polyurethane for Additional Protection, Color & Gloss Retention**

This will provide an expected service life of 12-15 years in a mild environment before any significant maintenance is needed.
